

How to Install Roman Blinds

If you would like further advice on your actual window, please email a clear digital image to (info@easyblinds.co.nz). Ensure all curtains are moved away from the window and that handles and the full window is in the photo.

Fitting the Brackets

Your blinds will come with the required number of brackets. Fit the end brackets about 100mm from each end of the blind. Additional centre brackets when supplied, should be evenly spaced. Make sure that the brackets are not located either on a fabric join or where they will interfere with the cords and other components. Your blinds will come with the required number of brackets. Fit the end brackets about 100mm from each end of the blind. Additional centre brackets when supplied, should be evenly spaced. Make sure that the brackets are not located either on a fabric join or where they will interfere with the cords and other components.

Attaching the Blind to the Brackets

Once all the brackets are fitted lift the blind into place. Note Fig 4 and 5 that the bracket fits into the top rail and under the front of the blind. Fix short screws into blind top rail to secure.

Fig.3 approx location of end brackets

Fig. 4 lower carefully the top rail into the bracket

Fig.5 using small screw fasten blind rail to bracket. Take care not to snag the fabric on the screw.

Pull the blind down fully and back up a couple of times to ensure that the blind is running smoothly.
